

MINDSYSTEMS AMODE[®]

Version 2

The smart all-in-one information management solution
Info Management | Visual ThoughtMaps | Project Plans

Release Notes:

Mindsystems Amode V1: Build 2446

Release Date: 15th Dec 2009

Bug Fixes:

Instability for PDF to Notes – We found that sometimes adding PDFs larger than 10mb causes instability due to translation of Adobe font sets. This is not something caused in the Amode coding, but interaction with PDF, so we have created limits to prevent the 'out of memory' error.

Attachments not saving to original – Word attachments would open and if a change was made and saved, it was saved to a secondary version, not the original that is embedded within the Amode file. This error has been fixed.

Filter bar custom date range not working correctly – The date range is supposed to show any tasks falling either fully or partially within the specified date range. This was malfunctioning in certain combinations. These malfunctions have been identified and fixed.

Enhancements:

Gantt Critical Path – Critical Path is a standards based algorithm used in many project management applications to help the user quickly identify the tasks most critical to the projects completion. You can access it from the Gantt Total Bar in 'Gantt Mode'. Click the icon near the zoom bar and the critical path tasks will be highlighted in red. Toggle off again to return to normal view.

Shadow Save - For larger sized files we have created a secondary save process to protect against corruption if you quit during save or your PC crashes. The system first saves to a shadow copy, waits until the system is stable and copies across (process takes same time as before but enhances stability if your PC has trouble at the moment of saving).

First Project First (Tab Order) - When opening a multi-project solution file the first project in the group is the one highlighted and open (previously it was the last in the list).
