

# MINDSYSTEMS AMODE<sup>®</sup>

## Version 2

The smart all-in-one information management solution  
Info Management | [Visual ThoughtMaps](#) | [Project Plans](#)

## Release Notes:

### Mindsystems Amode V2: Build 3340

**Release Date: 19th March 2010**

#### Bug Fixes:

- Failure to launch application when non-standard DPI screen resolution was found.

#### Enhancements:

- Drag and Drop of files from Windows system (ie Desktop) to topic branches or ThoughtPad shapes.
- Drag and Drop of web links from browser address bar to topic branches or ThoughtPad shapes.
- Recurrent Resource Type

The Recurrent Resource type is a special Resource type that can be setup to handle consumable items associated with your project, that are used over and over.

For example, you may have to send people back and forth between 2 cities several times a week. You do not want to have to create a unique resource for every air ticket you purchase. The Recurrent Resource type allows you to create a Resource called 'Airline Ticket'.

When you assign this to a task you will notice the box where you normally input the load changes to be a multiplier.

You assign the number of times the Airline Ticket will be used to complete this task and it will adjust the total of the project accordingly.

This makes the quoting and cost analysis process much easier.
